Claims: 1-18

Cited Literature: 1 and 2

Figure 2 of Cited Literature 1 indicates that inputted packets are accumulated according to their priority, and the accumulated packets are combined into a single cell and transmitted.

Furthermore, Cited Literature 2 describes how the transmission period of frames is determined in consideration of the CODEC period.

No particular inventive step is found in applying the art described in Cited Literature 1 to a wireless LAN.

(As indicated under Reason A, the above decision was made because the language of the aforementioned claims cannot be read to mean that when sending packets from a base station to a wireless LAN terminal, priority packets with different addresses are accumulated and combined into a single broadcast or multicast capsule packet for transmission. It is recognized that if reason A is resolved, reason B will also be automatically resolved.)

If any reasons for rejection are newly discovered, a Notification of Reasons for Rejection will be issued.
